

NAME

pcsv – print out the current version of the PCS mailer subsystem

SYNOPSIS

pcsv

DESCRIPTION

The PCSV program prints to standard output the current version of the mailer subsystem of PCS. The results is a string value.

FILES

`${PCS}/bin/pcsv` executable program

SEE ALSO

pcsmail(PCS), vmail(PCS), bbnews(PCS), prt-pcsmail(PCS), pcsname(PCS), pcsorg(PCS),
pcsprojinfo(PCS), pcsinfo(PCS)

NOTES

Note to Administrator: Contrary to intuition, the PCS version string is **not** compiled into the system. It is a string that is set (or can be set) by the PCS Administrator (usually at installation time). It is possible that the version string might not be set at all, in which case an empty value is returned by this program. This program is actually the invocation of:

`pcsconv version`
